Customer Reviews

My lab lost the use of his back legs all of a sudden. After extensive vet bills and visits, his meds were not allowing him to sit up. He just flopped over. We were afraid the end had come, and then a friend of mine, who is a breeder, recommended the drops. Within 24 hours, he was scooting everywhere he could. The droplets saved my 9-year-old lab, and even though he still cannot use his legs in the back, he uses his wheelie and drag bag to get around.
